A technology-agnostic software developer with a robust skill set encompassing languages like C#, Python, Rust, and front-end frameworks such as Angular and React. I bring extensive expertise in software development and architecture. I've been instrumental in spearheading the transition towards asynchronous event-driven microservices, leveraging domain-driven design and clean architecture principles. Equipped with a Bachelor's degree in Computer Science from RMIT University and additional studies in IT Security & Criminology from Deakin University, I combine academic rigor with hands-on experience to drive impactful software solutions.

SKILLS

| | |
|-------------------|---|
| Programming | C#, Python, Rust, Rust, Typescript, Javascript, HTML5 & CSS3, Java |
| Frameworks | React, Angular, .NET, Next.js, OAuth/OIDC, Tailwind, Langchain, Semantic Kernel, Spring/Spring boot |
| Databases | SQL Server, PostgreSQL, Elastic Search, Redis, CosmosDB, MongoDB, Pinecone, Qdrant, Azure AI Search |
| Tools | Rider, Visual Studio, VS Code, Cargo, git, Node, Eclipse, Maven |
| Cloud | Azure, Google Cloud, App Services, Service Bus, Blob storage, APM, Azure Functions |
| Operating systems | Mac OS X, Windows Server, Windows, Android, Linux distros (Kali Linux) |
| Other | Clean architecture, Microservices, Event Driven Architecture, Docker, OpenAI |

PROFESSIONAL EXPERIENCE

Present
August 2022

.NET Developer & AI | Mid-Senior, PREEZIE, CBD Melbourne

- Championed the AI project at preezie, leveraging semantic kernel and facilitating monthly Microsoft meetings from Redmond USA to remain at the forefront of technology advancements in Generative AI. Implemented advanced prompt engineering techniques, Vector search with embeddings, Retrieval Augmented Generation (RAG), AI Agents and more.
- Developed innovative solutions using microservices and clean architecture, enhancing existing legacy systems while integrating modern technologies like Angular and React for both backend and micro-frontend development.
- Solely migrated large-scale analytics data to a more cost-effective cloud architecture, reducing monthly expenses by 40% with minimal downtime.
- Single-handedly re-architected and optimized a critical legacy software system, doubling import speeds and ensuring future scalability while collaborating closely with senior leadership. Lead back-end developer for a successful new product, nextbuy, contributing to significant ARR growth and achieving cash flow positivity.

.NET 6/7/8 Elastic Search Redis CosmosDB Semantic Kernel React & Angular PostgreSQL DDD
Artificial Intelligence

August 2022
March 2021

Software Engineer | Graduate, MOTOROLA SOLUTIONS, Burwood Melbourne

- Co-developed a multi-tenancy-enabled full-stack solution for CrimeStoppers Tasmania's online crime reporting platform, garnering media recognition and awards. Designed for public anonymity, the platform features real-time report processing, media upload capabilities, and advanced management tools.
- Modernized a legacy product to enhance customer service, transitioning it from a Winforms application into a web application with fine-grained permission controls and Google account authentication. Improved productivity and decreased support needs significantly.
- Managed over-the-air updates for RACV-owned tablets, implementing necessary software patches and security updates through client liaison, ensuring device functionality and security compliance.
- Working closely with mission-critical clients such as Ambulance Victoria, Victoria Police and Fire Rescue Victoria doing UAT Tests for software patches. Following close guidelines and liaising with staff to ensure efficient speedy delivery of patches.
- Developed a web application to efficiently configure hundreds of routers to be installed in Ambulance Victoria vehicles. The app performed various file I/O reading and writing in an easy to use user interface.

+ ACHIEVEMENTS

- > Attendee of 2022 NDC Melbourne's Software Developer conference 5 day pass
- > 3rd place from 74 teams total. Best AI developed at RMIT. Used A* Search, Expectimax & Reinforcement Learning/Q-Learning with function approximation
- > Developed and hosted my own terminal themed portfolio site from scratch

EDUCATION

| | |
|-----------|---|
| 2018-2020 | Bachelors degree in Computer Science @ Royal Melbourne Institute of Technology (RMIT) University |
| 2014-2017 | Bachelors degree in IT Security @ Deakin University Burwood Campus |
| 2014-2017 | Bachelors degree in Criminology @ Deakin University Burwood Campus |

PROJETS

GITYAS

2023 - PRESENT

 github.com/yasir-fayrooz/GitYas - private repository

Creating my own Git GUI cross-platform desktop client as a spare side-hobby learning project using the Tauri framework with a React Vite frontend and Rust on the server side. Learned to code in Rust from scratch over time.

Rust Typescript Javascript Tauri Cargo Node Tailwind Visual Studio Code

PORTFOLIO

2022-PRESENT

 www.yasirfayrooz.com

Created my own terminal themed portfolio website to refresh my front-end developing skills in my own time.

Next.js React Tailwind CSS Firebase Cloudflare

SWORDLIFE

2020

 github.com/yasir-fayrooz/Swordlife

Created a game using Unity and published on the Google Play store for a short period in a team of 6 people for a capstone project at university.

C# Unity Android Google Play Aseprite
